### **DETAILED ACTION**

This general action is in response to the application filing date of 09/12/2003

\*\*Drawings\*\*

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character "J" has been used to designate both fan blade and turning axle. In addition, B3 in figure 3 does not have a description in the specification.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement-drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filling date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### Claim Objections

2. Claim 1 is objected to because of the following informalities: The transitional phrase "characterized in that" should be changed to "comprising" in accordance with U.S. patent practice. Appropriate correction is required.

## Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Application/Control Number: 10/660,501 Page 3

Art Unit: 1744

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

- 4. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
  - 1. Determining the scope and contents of the prior art.
  - 2. Ascertaining the differences between the prior art and the claims at issue.
  - 3. Resolving the level of ordinary skill in the pertinent art.
  - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 5. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Shomei (JP 2000074432 A) in view of Shyu (U.S.P.N. 6,494,589).

The Shomei reference teaches the following: ceiling fan having sterilizing and air cleaner device (drawing 2:7), upper cover (drawing 1:4), a driver (drawing 1:14), a motor mounted within the ceiling fan (paragraph 0009), a cold cathode ray light tube (drawing 1:11), a securing annular plate (drawing 2:12), a lower cover (the unlabeled lower part that corresponds to upper cover 4 in drawing 1), a controller (drawing 2:23), a turning axle (drawing 1:3) is capable of being connected to the controller, motor is capable of being connected to the fan blades (paragraph 0009 and drawing 1:6), a switch that is capable of controlling the operation of the motor (drawing 1:16), brightness, turning off the cold cathode ray light tube, the cold cathode ray light tube is capable of emitting UV light such that the body of the air cleaner is necessarily made of material that is capable of providing protection against UV light. The Shomei reference fails to teach how the individual parts of ceiling fan are connected together so that a

Application/Control Number: 10/660,501

Page 4

Art Unit: 1744

ceiling fan is obtained. The Shyu reference discloses the following: edges of the upper cover (figure 6:7) and the lower cover (figure 6:3) lodge into a groove (unlabeled groove in structure 3 in figure 6 where both upper and lower covers meet) of the security annular plate (unlabeled plate above lower cover 3 in figure 6), screws (figure 6:9), an array of protruding pieces (figure 5:10) and screws tighten down hook rings (figure 5:15) onto the protruding pieces. As a result, it would have been obvious to one having ordinary skill in the art at the time the invention was made to substitute the inherent integral-connected assembly of the Shomei ceiling fan with the connection assembly of the Shyu ceiling fan so that one or more lamp devices can be simultaneously assembled to the ceiling fan for changing the decorative effect (Shyu reference, col.1, lines 28-32).

#### Conclusion

- 6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The Moeller et al (U.S.P.N. 4,596,585) reference, the Crowhurst et al (U.S.P.N. 5,795,131) reference and the Eisenhardt, Jr. (U.S.P.N. 4,422,824) reference all teach placing UV sources into ceiling fans. The Tseng (U.S.P.N. 6,761,540) reference teaches a ceiling fan with connecting structures as recited in the instant claim.
- 7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to MONZER R. CHORBAJI whose telephone number is (571) 272-1271. The examiner can normally be reached on M-F 9:00-5:30.
